

Software and SAP

Localization, translation, and global rollouts

Multilingual solutions

Our services at a glance

Evaluating your software solution

Whether **software, SAP rollouts, apps,** or **web interfaces:** We support you in all of your complex international operations, during your agile development, and your programming sprints, from the concept through to implementation.

| Process set-up

Best-practice strategies for your translation process, tailored to your existing system landscape.

| Localization service

We analyze your source data and take over design, set-up, and project and quality management for you.

| High-tech infrastructure

Our localization process is supported by innovative tools, for a faster time to market for your software solutions.

| Acceptance tests

Native language professionals test your features from a user's perspective for linguistic, visual, and functionally optimized usability.

| All software is different

DLG, XML, PO, XLIFF, or CSV: We connect seamlessly to your system landscape. We can easily import and edit nearly every software resource format into our translation tools – **Microsoft Resource, Java Properties, and JSON.** We don't depend on any one tool and use **SDL Passolo** as well as **Alchemy Catalyst** and other tools.

| Content with length limitations and little context

There's usually only limited space available for menu texts, dialog boxes, and buttons. Software data often contains text strings with little to no context. Together, we establish a workflow that provides valuable contextual information in the translation process.

**Global content tailored
to your language and culture.**

Exactly our thing.

A Transline Group Company

Transline

Software Localization 

Software and SAP

Localization, translation, and global rollouts

Your workflow

for professionally localized software

**Translation process, terminology management, quality management
in accordance with ISO 17100, and user acceptance tests.**

Implementing your localization

- | Set-up and maintenance of the translation environment
- | Translation of your interfaces, documentation, and training materials
- | Assistance with language acceptance tests
- | Deployment of tools for automating translation processes
- | Multilingual master data
- | Support for system upgrades and data migration

Best-in-class-services

Your partner for software and SAP

Expertise for your projects

We have been successfully meeting the high expectations set out for SAP translators since 2004: We comply with the standards required by SAP Language Services and have maintained a close relationship for many years.

Quality – in everything we do

High-end quality management

Quality is our top priority. That's why every one of our translation projects goes through our professional quality assurance system. And, of course, we're certified to DIN EN ISO 17100.

**Global content tailored
to your language and culture.**

Exactly our thing.

ITÉ

Transline

Software Localization 

Your products and all accompanying material have to reflect the linguistic and cultural characteristics of the target country. This creates applications that are understood and experienced globally – for optimum user experiences that transcend linguistic borders.
